Coulter/Row Cleaner Combination

Central Insecticide System (CIS)

Active Pneumatic Downforce

Fertiliser Openers

Cast-iron Closing Wheel

RowCommand

## 1 Coulter/Row Cleaner Combination

Ideal for those times when opener discs need help penetrating tough soil and residue — plus, for tilling the seedbed to help the closing wheels create good seed-to-soil contact.

## 2 Central Insecticide System (CIS)

This system directly injects a high-performance liquid insecticide (Force® CS\*) into the flow. It's then applied in a T-band over the seed furrow. Available on select models with Pro-Series™ XP row units only.

\*Force is a registered trade-mark of Syngenta®

## 3 Active Pneumatic Downforce

Automatically maintain precise soil penetration and consistent planting depth without sidewall soil compaction.

## 4 Fertiliser Openers

Single- and double-disc, frame-mounted fertiliser openers work well for a wide range of tillage conditions, including conventional, reduced, moderate no-till and more.

## 5 RowCommand™

Automatically shut individual row units on and off to limit seed overlap and waste — particularly on headlands, waterways and point rows.

## 6 Cast-iron Closing Wheel

These closing wheels are best for tough soil and heavy residue conditions when more pressure is needed to close the furrow. Angle and stagger adjustments are identical to standard rubber wheels.

Talk to us today about how attachments can **Add More** to your Planter.

## Add More Productivity

### 3.0 Bu. Vac Hopper & Lid

Plateless and vacuum plastic 3.0 bu. seed hopper and lid.

### Row Cleaner

Row cleaners help clear residue and debris, provide quicker soil warm up and germination, and maintain a more uniform seeding depth. Essential in reduced tillage conditions.

### Double Disc Unit-mounted Fertiliser Opener

This opener disturbs less soil than frame-mounted openers. It features tungsten wear strips for long life, plus internal disc scrapers. A 6-degree blade angle opens the soil for fertiliser placement at seed depth or 2.54cm (1 in.) below. Recommended for conventional and reduced-till soil conditions.

## Add More Versatility

### Tillage Hanger

*(Row Tillage Support Bracket)*

Kit includes pointer, scale, and a large, easy-to-use adjustment knob to achieve your working depth goal. Required with tine tooth tillage, conservation furrower, and V-wing attachments when ordered as extra equipment.

### Row Unit Lock-Up (1R)

This handy device "locks up" your row units so they don't engage the soil as your planter passes through fields.
